

Study Design Specifications (SDS) Template Completion Instructions

This template is used to capture details regarding the study design required in support of the clinical protocol. The following details are required. Please do not alter the structure or formatting of the existing worksheets; do not delete columns or change column headers.

Worksheet	Detailed Instructions
Applies to all Worksheets	Examples are provided in green text. Delete the example rows as applicable before deploying document. Update header protocol information, change font to black and un-italicize. The column headers must not be changed.
	White Column Header: Indicates that values in that column are required.
	Yellow Column Header: Indicates that values in that column are optional.
	Orange Column Header: Indicates that values in that column are conditional required. Meaning the value becomes required based on the entry/selection in another column. The conditional requirement in these columns is specified per attribute.
Document Version History	Complete the Document version history tab following the instructions provided on the tab including the summary of changes.
EventDefinition	Complete the definition of events with the list of unique visits. Description of visits attributes is found below: Event Title: Please indicate event name/title in the space provided. Event titles must align as closely as possible to actual protocol event names but must align with Pfizer's event naming convention.- This value shows in the EDC for users to reference during navigation. Unique Event Name: This is an internal attribute that uniquely identifies an event, and it must align with Pfizer's event naming conventions. This attribute is not visible to Electronic Data Capture (EDC) users. Description: Optional attribute used to provide a description of any special functionality required in the visits. For example, if we are creating repeating Cycle visits, what is the format to name those visits. Type: Indicate the visit type. The list below indicates visit types and how they behave in the system.
	Static: Static visits show immediately after the subject is enrolled. A static visit cannot be set up as dynamic.
	Unscheduled: Unscheduled, scheduled and parent events are the types of event that can be setup as dynamic. Unscheduled events that are not setup as dynamics, can be added manually by the user clicking the "Add Event" button; however, if setup as dynamic, then the unscheduled event does not show when clicking the "Add Event" button.
	Scheduled: These events do not initially show by default and instead need to be added via dynamics. Note that scheduled events cannot be created by the site user manually (eg, clicking the "Add Event" button). When an event is set up as "Scheduled" it is automatically set up as dynamic as well. This is the type of events that are needed to set up dynamic visits or child visits like Day1 and Day 15 in a Cycle parent visit.
	Parent: Parent visits are visits that host 1 or more visits. For example a parent visit "Cycle" in Oncology could host multiple visits like a "Day1" visit and "Day15" visit. Parent visit is other type of visit that could be set up as dynamic. Parent visits must be used when a group of visits with identical content need to repeat. By using parent visits in those scenarios, the visit can be declared and programmed once, but they repeat as many times as needed. Again the Cycle visits in Oncology are a perfect scenario to use Parent visits, because setting up the solution once, unlimits number of cycle visits at the subject level that could be created.

	Assign to Parent: Enter the Unique Event Name of the Parent visit this visit is assigned as child of. An example of a parent visit would be a CYCLE visit in Oncology having Day 1 and Day 15 as child visits. Using a parent visit in this case then helps to define the cycle visit only once and reuse it as many times as cycles are needed at subject level. Max Repeats Allowed: For non repeating visits, enter 1. For the Unscheduled visit enter 999. There might be another repeating visits like the Illness visits in Vaccine, where only a specific number of visits (eg, 3) is predefined to be collected. In those cases, enter the exact number of visit instances of the repeat that are needed. Day Schedule: Applicable only to "Static" and "Scheduled" visit types. Indicates the day the visit is scheduled counting from baseline. For example, for the "Week 3" visit this attribute would be equal to 21 as the day this visit is scheduled. Day Min: "Day Min" and "Day Max" allow setup of a period within which the visit could occur. In the case of "Day Min", it indicates the number of days prior to the "Day Schedule" value that a visit could start without being considered a deviation. For example for the "Week 3" visit, the protocol might indicate that this visit could start 3 days <i>prior</i> the 21 day schedule (eg, at day 18). In this example, the value entered in "Day Min" is 3. Day Max: "Day Min" and "Day Max" allow setup of a period within which the visit could occur. In the case of "Day Max", it indicates the number of days after the "Day Schedule" value that a visit could occur without being considered a deviation. For example for the "Week 3" visit, the protocol might indicate that this visit could start 4 days <i>after</i> the 21 day schedule (eg, at day 25). In this example, the value entered in "Day Max" is 4. Active: Use to indicate if a visit is active or not. During initial build the value of this attribute will be TRUE for all visits. If during amendments a visit needs to be removed, indicate so by updating this attribute as "FALSE". Repeating: Applicable only for "Unscheduled" and "Scheduled" visit types. Indicates whether a visit is repeating or not. Enable Event level eNOTES: Applicable only for Direct Data Capture (DDC) enabled studies. Insert Yes to enable electronic notes at the event level.
Instruments	Complete the definition of events with the list of instruments and corresponding visits. A new row is required for each event-instrument assignment. At each Event-Instrument entry, list the name of the instrument. Description of "Instruments" attributes is found below: Event Title: Enter the name of the event that hosts the instrument. Enter the events in the same order that they should display in the study per protocol. For example, if the event "Screening" is first, create a row having the "Screening" event for each instrument that is needed in that event. Instrument Name: For each of the rows defined for a parent event, enter the corresponding instrument name as per the protocol time and events. For example, if event "Screening" requires to have instrument "Date of Visit" followed by "Vital Signs" in that order, then the "Screening" visit will have 2 rows, the first one will list "Date of Visit" while the second one will have "Vital Signs". Instrument Title: Enter the instrument title. The following Instrument attributes are applicable only for DDC enabled studies: Available on mobile: Insert Yes to make the instrument available in mEDC (mobile EDC). Enable Filed level eNOTES: Insert Yes to enable electronic notes for all the fields in the instrument. Enable within form Subject navigation: Insert Yes to all Subject navigation while remaining at the same instrument.
Variable Permission Groups	Use this tab when there is the need to change the way that variables display for a specific role(s). Enter a row in this tab for each different variable permission group needed. Note: In order for these changes to take effect, the role(s) impacted need to also have the correct Permission setup under the "Variables Permission Groups" permissions. Variable Permission Groups: Enter the name of the group. Display Permissions and Roles: Provide the display type needed which could be Hidden or Read-Only or Update and the corresponding role(s) that need to have that variable display. It is acceptable to have multiple display types and roles assigned under the same variable permission group. Instruments and Variables: Indicate the instruments and corresponding variables that are part of the Variable Permission Group.

Field Link Map Export	Instrument 1: Use Instrument Name to Indicate one of the instruments that will be linked. Repeating group 1: If the link is needed at the form record level (eg, Adverse Event record), then this value is not applicable. If the link is needed at a record in a group of fields in the form (for example in a lab page, the link might be needed at analyte level to connect an analyte having results out of range with an Adverse Event record), then enter the name of the "Group of fields" object found in Instrument 1. Context 1: Select the fields from Instrument 1 needed for sites to identify the record(s) to be linked. For example, if Instrument 1 is setup as "Adverse Event", then the fields entered could be the adverse event term and date to uniquely identify the AE records. Instrument 2: Use Instrument Name to indicate the instrument to be linked to the instrument selected in "Instrument 1". Repeating group 2: If the link is needed at the form record level (eg, Adverse Event record), then this value is not applicable. If the link is needed at a record in a group of fields in the form (for example in a lab page, the link might be needed at analyte level to connect an analyte having results out of range with an Adverse Event record), then enter the name of the "Group of fields" object found in Instrument 2. Context 2: Select the fields from Instrument 2 needed for sites to identify the record(s) to be linked. For example, if Instrument 2 is set up as "Concomitant Medication", then the fields entered could be the Medication and Medication Date to uniquely identify the CM records.
Plans	Site Group: For studies running a single SDV strategy in the study, this setting will be "All Sites". In the case of studies that are running 2 or more strategies, then the value for "Site Group" for each strategy needs to be specified according to the group of sites that will be included in that strategy. Note that site groups are created at the tenant level by the ADMIN team. SDV %: Enter the SDV % assigned to the study or in case of multiple SDV plans, then the percentage for each. If the study is running a 0% SDV strategy then enter 0. Variable: List all the fields that are present in the study in this column. The list of variables in the study could be extracted from column "Variable/Field Name" in the report "Export Data Dictionary" found in the "Instruments" tab in Study Central. Label is the variable label to help decode variable identifiers Variable Level Access: List of study setting for each variable. 'None' represents visible and enterable. 'Hide' should be aligned with the Variable Level Permissions Groups to manage any access. Data Review Tier: Specify for each variable whether the Data Review Tier value should be "Minimal", "Supportive" or "Critical". Fields_to_ SDV: This is the Standards Source Data Verification (SDV) plan. For each field in the study, indicate with an X if the field should be included for SDV. Leave this column empty if the study is running a 0% SDV strategy. If the study has more than 1 SDV plan (eg, due to a different SDV at cohort level or for China sites), add the plan as an additional column(s) after the "Fields_to_ SDV" SDV Plan column to define the fields that should be part of that additional plan as well as the plan SDV percentage. See examples in the "Plans" tab.

SAE	Retrieve the standard E2B mapping template from the Pfizer MetaData Repository (PMDR). Filter for tags with Standards Category of 'Standard - Modifiable - Required' and 'Standard - Conditional - Required'. Review the user guidance for each and edit Expression Definition column as needed. Any additional EC, CM or LB instruments (ex: EC001_2_1, CM001_2, LB001_1_2) added to the study will need have tags added to the mappings. Copy existing sets of rows where the E2B Mapping Category is either 'Drugs' for EC and CM and 'Tests' for LB and insert into the sheet as appropriate. Update the Variable Name and Instrument Title to align with the values from the study setup. User guidance also will provide instruction for when tag duplication is expected. Once all 'Standard - Modifiable - Required' and 'Standard - Conditional - Required' tags are edited/duplicated as needed copy over all tags being used into SAE SDS tab. Copy from column Expression Definition to E2B Tag. Column Definitions: Add/Edit/Remove : This column to be used in SDS versions after initial to denote when a change has been made. Expression Definition : This column contains instruction for builders and is where CDS will make study specific updates to green template text. Event Title: Modify based on which event a specific instrument is mapped from. If this is empty in the template, leave empty to indicate all events or the event information will be embedded into the expression programmed for the E2B tag. Instrument Title: Modify as appropriate to properly reflect the title of instruments in the study if any adjustments were made. E2B Mapping Category: Do not modify the contents. Label: Do not modify the contents. E2B Tag: Do not modify the contents.
CM Study Maps	Complete the Mapping Variable for each standard Clinical Model (CM) Study Map. The Mapping Variable must resolve to a single value per subject, provide the Event and/or indicate if a Minimum/Maximum or similar aggregation is to be used. Multiple variables are to be used separated by "OR" if a subject will only have one populated per design. If the particular study map is not applicable to the study, indicate with TRUE in the Intentionally Blank column and leave Mapping Variable blank. Since this will very rarely be the case, consult with the study builder if this is being considered.
DSOPI	The content within Model_Attribute_name and Model_name columns should not be changed as they are standard metadata for the SM_R_SUBJECTCLINICALSTUDY_V table. Source_table, Source_variable and Condition need to be filled in based on the study requirements. Source_table: Enter the Standard Data Review Model (SRDM) table where the data can be sourced. If there are multiple tables, enter each separated by a comma. Source_variable: Enter the column in the Source_table where the data can be sourced. If there are multiple columns, enter each separated by a comma and prefix the variable with the table name. Condition: Enter the condition where a row for a subject in the Source_table will have the relevant value in Source_variable. Express the logic following the examples. The resulting logic must evaluate to a single value in a single record per subject. If the particular variable is not relevant for the study e.g., SFDATE for a study not collecting screen failures, then put "Not Applicable" in the Condition.
SRDM Defaults	Retrieve the latest study-defined SRDM defaults from the PMDR Spotfire RCC SRDM Default Values Report and add to the SRDM Defaults tab For each mdes_form_name used in the study, check if the default_value for the given item_refname is appropriate for the study. If not, update per standards guidelines in the PMDR referencing the collection_guidance. Add an X to the USED column to signify it is used in the study. Leave blank for non-applicable forms. If the study has any study-level forms, duplicate each entry from the base mdes_form_name for that study-level form. Leave the item_refname unchanged and modify the default_value if different for that form. Add an X to the USED column to signify it is used in the study.

VISITNUM	Complete the VISITREFNAME and VISITNUM values for all visits specified in the EventDefinition tab. Use the VISITNUM macro to produce the first draft of the VISITNUM content. STUDYNAME is the study protocol ID. It is populated for downstream needs. VISIT_NAME represents event Name as seen in the EDC interface. This column is used to setup unique payment events in IPS system. For parent-child visits, event Name must be extrapolated out to all possible occurrences. The format will be <parent Name><single space><Occurrence><single space><child Name>. VISITREFNAME must match the Unique Event Name from the EventDefinition tab. It is the unique visit name that is used across downstream consumers of study data and adheres to the conventions in the standard RCC Event Naming Conventions document. For parent-child visits (i.e., where Assign to Parent has a value), these must be extrapolated out for the expected number of occurrences. This will be <parent Unique Event Name><Occurrence>_<child Unique Event Name>. E.g., for parent CYCLE and child DAY1, there would be CYCLE1_DAY1, CYCLE2_DAY1, CYCLE3_DAY1, etc. If the values do not adhere to naming conventions, the value in VISITREFNAME_ACTUAL will be different to accomplish that. VISITNUM is the unique number corresponding to each visit that allows for visit sequencing and remains unchanged during the course of the study. VISITREFNAME_ACTUAL: Value must match VISITREFNAME, except in cases where the extrapolated VISITREFNAME for parent-child visits does not result in values that adhere to the RCC Event Naming Conventions. In that case, the values should be updated to adhere to the conventions. E.g., for VISITREFNAME values of DA1_WEEK, DA2_WEEK, and DA3_WEEK, VISITREFNAME_ACTUAL might have values WEEK6, WEEK12, and WEEK18. If that may be applicable to the study, consult with the database programmer for guidance.
Collection Derivations	Collections such as PK and Electronic Sample Tracking (BEETR010) with same variable structures, but with different timepoints, analytes/sample collections, and/or other protocol specified values at different visits, can re-use the same instrument and dynamically populate these prespecified values using rules with add entry function. This tab is used to record the prespecified values. This is an optional tab and can be left blank. Column Definitions: Add/Edit/Remove: This column to be used in SDS versions after initial to denote when a change has been made. Rule Name: As defined in the DIP. The content provides additional detail to guide the application of a rule at the variable level. Instrument: The instrument with values dynamically populated. Event(s): The event(s) the dynamically populated value is applicable to. Row #: The row number of the variable Variable=Value: Provide the value to be assigned to the variable. If multiple variables should be populated with values in the same row, use delimiter ; to separate them, and put new variable=value on a new line in the cell. If any value contains delimiter ";", use notation ; . Dynamic Condition: specific conditions under which the Value(s) should be assigned to the Variable(s), eg. when DS001_2.SUPPDS_DSRANDSC_001_2 = PART 2 COHORT 2 or PART 2 COHORT 1
Local Lab Ref	Only applicable for studies using the local lab, i.e, LB001, instrument. This tab is intended to capture the details of each local lab instrument including each Lab Test and the display order. Instrument Name must capture each lab copy of the lab instrument, e.g., LB001_1, LB001_2... Instrument Title should include permissible title updates aligned with the ASB Lab Test must outline each lab test in the intended order of display.
Integrations	Include all Case Report Form (CRF) Integrations in this tab, including Interactive Response Technology (IRT) Integration and/or CRF Data Load Integration Mappings Integration: Enter CRF integration type: IRT in case of IRT/Impala Integration or CRF for Data load directly in the CRF. Variable: Integration variable setup at tenant level. Instrument Name: Study CRF where data is loaded. Variable Name: Study CRF field where data is loaded. If study is not using any CRF integrations, mark all the columns as not applicable. Note: For both CRF and IRT integrations, Integration setup at tenant level will have to be completed in order to see Variables at the study level.

Study Specific Design Changes	Study Specific Design Changes tab applies only for studies with approval to deviate from the Standard build that will need to document study specific changes. Study Specific Design Changes tab must be removed/deleted from SDS if no study specific changes are identified in the study. Object Type: Indicate the type of the object that needs the change. For example it could be an event definition parameter, study parameter, rule parameter, or clinical model mapping. Object Name: The Standards name of the object that needs to be altered. In the case of a study parameter, the name of the parameter itself for example "<i>Allow Instrument edit outside of Scheduled Event Range</i>". Work with the study programmer to correctly identify the object name. Description of the change: Provide a description of the change that is needed to that object. For example in the case of "<i>Allow Instrument edit outside of Scheduled Event Range</i>", the description could be "<i>For ePRO instrument XYZ, unselect this option. As per protocol, this instrument cannot be completed outside the scheduled window</i>".
The SDS tabs are color coded as follows:	
Tab Color	Completion Details
Grey	Informational; no changes required.
Yellow	Populated during build or when updates are required after Study Design Specifications have been approved. Check for completion/accuracy at time of finalization/sign off.

C2321008

Document Version History

NOTE: Amendments made to study design specifications should be documented here with a summary of or reason for the changes with any study amendment. This description must be detailed and specific.

Version	Author	Date	Updated SDS tab (if applicable)	Summary / Reason for Change(s)	Protocol / Amendment Approval Date for this SDS Version
V1.0	Sonia Haroun Lian Hui Peng Manyi Liu	19-Aug-2025	Not Applicable	Initial Version.	Protocol Amendment 1 Approval Date 16-Jun-2025
V1.1	Stacey Cohen	12-Jan-2026	Not Applicable	RCC ASB to include D_DS_DUMMY_001 and SAE+ related changes	Protocol Amendment 1 Approval Date 16-Jun-2025
V1.1	Stacey Cohen	12-Jan-2026	Plans	D_DS_DUMMY_001 added.	Protocol Amendment 1 Approval Date 16-Jun-2025
V2.0	Catherine Maxted-Howes	03-Mar-2026	Instruments	1. Add new ADDITIONAL INFORMED CONSENT - PROTOCOL AMENDMENT 3 form DS001_1	Protocol Amendment 2 Approval Date 15-Dec-2025
V2.0	Catherine Maxted-Howes	03-Mar-2026	Plans	1. Add new questions in EC001_4 and EC001_4_1 (planned dose and planned dose unit). 2. Add new ADDITIONAL INFORMED CONSENT - PROTOCOL AMENDMENT 3 form DS001_1	Protocol Amendment 2 Approval Date 15-Dec-2025
V2.0	Catherine Maxted-Howes	03-Mar-2026	Local Lab Ref	1. Updated list of analytes for existing forms (LB001_8 and LB001_14 and LB001) to include PX32	Protocol Amendment 2 Approval Date 15-Dec-2025
V2.0	Catherine Maxted-Howes	03-Mar-2026	Not Applicable	1. Add codelist options Protocol Amendment 2 and Protocol Amendment 3 to Trigger Form (R_TRIG001) 2. Minor mapping update in clinical model to have defaulted values populated for TUTMM001 (baseline tumor) and R_TUTMM002 (non-lesion). 3. Update IE002 for criteria text linked to protocol amendment(s) 4. Update to codelist to include 'NO LONGER CLINICALLY BENEFITTING' DSDECOD_001_5 / DSDECOD_001_5_1 and on forms DS001_5 and DS001_5_1	Protocol Amendment 2 Approval Date 15-Dec-2025
V2.0	Catherine Maxted-Howes	03-Mar-2026	Not Applicable	4. Update the following variables as 'Item Required' = No CM001: R_SUPPCM_CMAENO1_001, R_SUPPCM_CMAENO2_001, R_SUPPCM_CMAENO3_001, R_SUPPCM_CMAENO4_001, R_SUPPCM_CMAENO5_001, EC001_4: R_SUPPEC_ECAENO1_001_4, R_SUPPEC_ECAENO2_001_4, R_SUPPEC_ECAENO3_001_4, R_SUPPEC_ECAENO4_001_4, R_SUPPEC_ECAENO5_001_4 EC001_4_1: R_SUPPEC_ECAENO1_001_4_1, R_SUPPEC_ECAENO2_001_4_1, R_SUPPEC_ECAENO3_001_4_1, R_SUPPEC_ECAENO4_001_4_1, R_SUPPEC_ECAENO5_001_4_1 PR001: R_SUPPPR_PRAEID1_001, R_SUPPPR_PRAEID2_001, R_SUPPPR_PRAEID3_001, R_SUPPPR_PRAEID4_001, R_SUPPPR_PRAEID5_001 PR001_2_4: R_SUPPPR_PRAEID1_001_2_4, R_SUPPPR_PRAEID2_001_2_4, R_SUPPPR_PRAEID3_001_2_4, R_SUPPPR_PRAEID4_001_2_4, R_SUPPPR_PRAEID5_001_2_4	Protocol Amendment 2 Approval Date 15-Dec-2025
V2.0	Catherine Maxted-Howes	03-Mar-2026	SAE	1. Added new line for Indication for Use in Case from CM001 to populate with CMINDC_001 instead of MHTERM_001_2	Protocol Amendment 2 Approval Date 15-Dec-2025
