The criteria for determining whether an abnormal objective test finding such as ECG should be reported as an adverse event during a clinical trial are as follows: - Test result is associated with accompanying symptoms; and/or - Test result requires additional diagnostic testing or medical/surgical intervention; and/or - Test result leads to a change in trial dosing or discontinuation from the trial, significant additional concomitant drug treatment, or other therapy; and/or - Test result is considered to be an adverse event by the investigator or sponsor. Merely repeating an abnormal test, in the absence of any of the above conditions, does not constitute an adverse event. Any abnormal test result that is determined to be an error does not require reporting as an adverse event.
